

helping
architects and
builders achieve
energy ratings of
up to 10-stars

... by making Australia's most energy efficient windows

Alfresco living is much in demand for entertaining. The trend towards building homes with an abundance of natural light and a seamless connection between interior and exterior spaces is growing. Open up your house with sliding doors, stacker sliders, giant sliders or corner sliders for indoor outdoor living.

Paarhammer lift-slide doors achieve their outstanding energy efficiency through their unique airtight framing design that incorporates multi-level rubber seals to eliminate drafts. Easy gliding action is achieved through specially engineered lift-slide functionality which also facilitates floor level installations for step-free access and a cleaner look.

Lift-Slide Doors Sliding Door Giants Stacker Doors Corner Sliders

For 25 years, Paarhammer windows & doors have been setting the benchmark in energy efficiency in Australia.

Double or triple glazing together with a double layer of seals and multi-point locking ensure energy savings of up to 84% and a sound protection of up to 45dB. This is some 80-90% over conventional sliding doors.

The German engineered hardware lifts and frees the slider to guarantee easy gliding and is also available motorised. Outstanding security is provided through multi-point locking. The threshold can be recessed into the floor. Lift-slide doors are draft free and ideal for high wind loading.

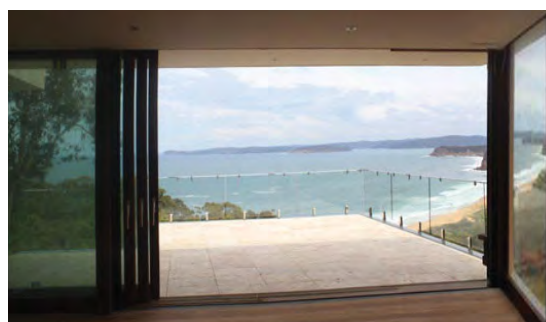

For an alfresco lifestyle or architectural accents, Paarhammer sliding doors are the answer.

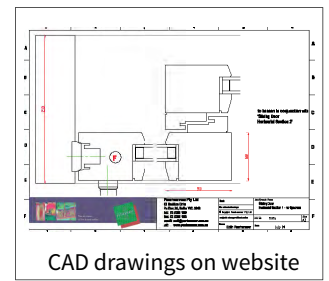

Custom-made

Sliding doors are available in a multitude of configurations including stackers, and can be up to 3m high or 5m wide per leaf (up to 400kg). A variety of double or triple glazed glass options are possible.

There is a range of timbers to choose from, including FSC® (Forest Stewardship Council®) certified timbers. Products can be ordered fine sanded only or spray painted in a variety of finishes and colours.

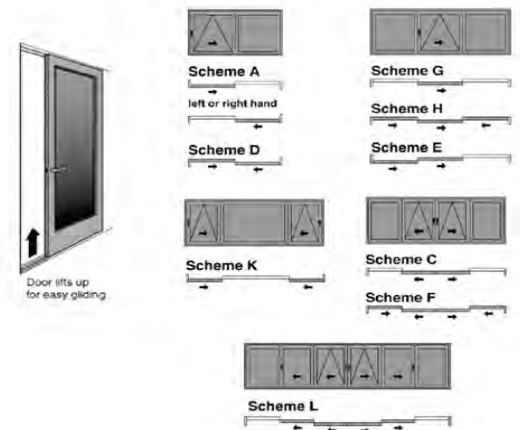

Innovation and problem solving are hallmarks of Paarhammer. The company was the first to introduce bushfire safe windows and doors to Australia. Lift-slide doors are available, tested and approved for all bushfire levels including BAL-29, BAL-40, and BAL-FZ, without the need for shutters.

Accessories available include timber flyscreen doors, retractable screens, and in-glass venetians.

Outstanding quality, security features and design flexibility ensures architects, developers and home-owners achieve superior results.
