

Case Study

Dendy Park

When architect Cohen Leigh needed an attractive ply product as a feature for the exterior of the new Dendy Park sports pavilion, our Maxi Panel Baltic Birch Natural was the perfect choice.

The building is the centrepiece of the Dendy Park recreation area and is home to the local cricket and soccer clubs and the striking façade is a highlight.

The project required a plywood that was suitable for exterior use under the soffits. Our Maxi Panel Baltic Birch coated with hard-wax oil was selected for both its attractive look and durable finish.

The hard-wax oil acts as a UV stabiliser, making it suitable for exterior conditions (when positioned in a semi-protected area out of direct sunlight and exposure to weather). Another key benefit of the ply was that we were able to provide the panels exactly as specified by the architect, complete with perforations. This saved the on-site team time and hassle and allowed for fast and easy installation.
